## Description

Yelkin® Lecithin is a surface-active agent with unique properties, derived from soybeans. Yelkin® Lecithin can modify the boundary layers between many types of substances. In the presence of two immiscible liquid phases, Yelkin® Lecithin reduces the surface tension and acts as an emulsifier. When used between a solid and a liquid phase (instantizing) Yelkin® Lecithin acts as a wetting and dispersing agent. When used between solid phases Yelkin® Lecithin acts as a lubricant or release agent.

## Applications

Lecithin has been found useful in a wide variety of food processing. As a food emulsifier lecithin is used in the manufacture of margarine, vegetable and dairy based milk replacers including infant formula and ready to use frostings. Lecithin is the active ingredient in many food grade release agents such as pan oils, griddle greases and aerosol coatings. Lecithin is also used to alter viscosity in chocolate products and compound coatings. In bread baking applications, lecithin acts to improve dough machinability, volume, symmetry and shelf life. In crackers, cookies, cakes and pies lecithin improves shortening dispersion and acts as a release agent.

## Appearance

Light Amber Liquid

## Ingredients

Soy Lecithin

## Storage

Storage temperatures should be between 50-95°F (10-35°C). Exposure to freezing or near-freezing temperatures may promote separation of oil from the phospholipids. Separated product may be remixed under heat and agitation without loss of functionality. Avoid excessive exposure to light and moisture. Shelf life is a minimum of 24 months when stored unopened in the original packaging.
