

What is Nepheline syenite?

A unique all natural sodium–potassium–aluminum silicate mineral HIFILL® N additives are available in ultrafine, precisely controlled particle size distributions for optimum performance. HIFILL® N allows for formulation and processing cost reduction while not adversely impacting the products' physical properties and durability.

What loadings?

Start with replacing CaCO₃ - 1:1

Any physical performance decline?

NO - Nepheline syenite behaves basically the same as CaCO₃, as far as mold shrinkage, melt index, tensile, impact, HDT, flexural modulus etc.
