

AGRICULTURAL PRODUCTS

dar-tech, inc. distributes specialty chemicals and raw materials from its global network of suppliers that are used to formulate state-of-the art agricultural products. These resins, surfactants, dispersants, waxes, specialty clays, and functional minerals are used in seed coatings, soil conditioning, and fertilizers. dar-tech also is a proud member of the American Seed Trade Association.

AGRICULTURAL CHEMICALS FOR THE SEED TREATMENT INDUSTRY

AFCONA ADDITIVES

Dispersing, slip/wetting agents and defoamers for water-based colorants, seed coatings, and liquid fertilizers.

BURGESS PIGMENT

Kaolin clays are a naturally occurring mineral, kaolinite. Kaolinite is a platy, aluminum silicate, which is white or off-white in color. These grades of kaolin are available as water washed, calcined, or surface modified.

KURARAY

The use of Kuraray POVAL™ PVOH resin as a coating aid on seeds is widely accepted. POVAL is used to protect seeds from damage during handling, to prevent dust, and to provide a cosmetically pleasing appearance. POVAL also work as binder for fertilizers and pesticides to support and control the seed germination.

MAGRIS TALC

Solutions for agricultural applications such as fertilizer additives, agrochemical carriers, growing media, soil conditioning, plant protection, and processing agents.

PPG SILICA PRODUCTS

HI-SIL® precipitated silica products provide high absorptivity and chemical compatibility for many active ingredients and liquid chemicals. As a result, they can be used to convert liquids and other viscous materials easily and efficiently into dry, storage-stable, free-flowing powders, which dramatically enhances the ability of manufacturers to efficiently store, move, weigh, dose, and blend ingredients. An excellent choice as a carrier for liquids and anti-caking agent for powders.

SOUTHEASTERN PERFORMANCE MINERALS

Muscovite micas are a platy-shaped mica with a high aspect ratio, chemical inertness, and superior color for seed coating applications.

TOLSA

Specialty clays for the seed treatment and fertilizer applications used as absorbents, carriers, binders, thickeners, thixotropic, suspending agents, or fillers for high water absorption.

For 70 years, dar-tech has provided additives, functional materials, resins, and pigments to a wide variety of industries.

ADHESIVES & SEALANTS
AGRICULTURE
CIVIL ENGINEERING
ELASTOMERS & RUBBER

METALWORKING
LUBRICANTS
PAINT & COATINGS
PLASTICS

PRINTING INK /
